Meaning of the phrase "from the beginning" in this context? In the movie The Bourne Legacy, there is a scene where the lead actress' agent is telling her that she has got the part. She replies "Thanks, from the beginning". What does she mean by this phrase? I'm guessing she means: "thanks from the beginning because this is your first big film"? A: "From the beginning" means "at the start" or "from the very beginning". This is a common idiom. Here, the actress is saying: "From the start (of the process), you've been very helpful/caring, so thanks a lot". There are many idioms of this type ("from the start", "from the very beginning", "from the beginning of the day", "from the beginning of the week", "from the beginning of the year", etc.) Q: Javascript: how to remove item from array on click I'm stuck on creating a shuffle function in javascript that removes an item from the array on click. At the moment my code is: `var shuffled = [5,`

---

3, 1, 0, 4]; shuffle(shuffled); function  
shuffle(array)

A: Just found a much easier way to do this in the Newgrounds Webboard. Search for 'newgrounds' and click the 'Download complete' button. The.stw and.et files can be found in the files archive. Camp Fire survivor adds Jimmy Kimmel to her list of harassers and bullies Tayler Wiles | Napa Valley CAMPBELLTON, Calif. — A California woman who survived the deadly 2017 Camp Fire has added talk show host Jimmy Kimmel to her list of "harassers and bullies" following a recent interview she did with ABC7 News. Speaking to the network on Monday, Melissa Moody, 40, described her experience fighting for survival while losing her home and other belongings as a direct result of President Donald Trump's decision to slap tariffs on the nation's

---

neighbor to the north and Mexico. Since her October debut on The Jimmy Kimmel Live! show, the country music singer-turned-activist has been reluctant to allow the media the opportunity to interview her, citing ongoing harassment, according to a recent media report. The woman, who has been going by the name of Melissa Lee since returning from the hospital, recently commented on Kimmel's interview with reporters. "Not to take away from what was a really incredible interview... but all that time was really taken up by interviews that were nowhere close to real," Moody commented. "I realized that after a few interviews that I was just talking to reporters at the end of the month — long interviews that I was doing for cameras. "I realized that I have a voice and a story that needs to be heard. I really need to use that voice for myself and not for everybody else," she continued. While expressing a desire to move on and focus on her career,

---

Moody did acknowledge the opening that Kimmel's interview provided. "His interview opened the door to let people know that you can't bully someone," Moody said. "I think he was absolutely wrong and he was absolutely in the wrong. I think it opened the door for people to hear my voice and that's the beauty of this whole thing and that's why I really want to thank him for that." Moody also spoke about gaining back her health after being hospitalized for two weeks with "hyper-excitement disorder" and PTSD. Her story as it relates

Emergency room personnel must exercise unusual caution to avoid injury, particularly during the performance of the most important tasks in emergency medical care. One of these tasks is the resuscitation of patients. When resuscitation efforts begin, attempts must be made to maintain the patient's circulation. The heart is a pulsatile organ that is highly sensitive to pressure variation. Any pressure applied to the chest cavity during resuscitation from cardiac arrest will either restrict the blood flow to, or compress, the heart. Cardiac output and the rate at which oxygenated blood is delivered to the major organs, such as the brain, are limited by the flow of blood through the aorta. Cardiac pressure fluctuation or resistance to the diastolic flow of blood, also known as peripheral resistance, can be increased by compression of the chest or the increased

---

tethering forces caused by lung inflation. In addition, when the patient is first delivered to the emergency room, the patient's circulation is often in shock and the patient's lung and chest cavity are severely collapsed due to the lifting from the ground and emergency room setting. If chest compression is attempted at this time, the patient's blood pressure may drop precipitously and the patient may become hypotensive. The heart must then be compressed to increase cardiac output in order to compensate for this sudden drop in blood pressure. The problem of chest compression is compounded by the fact that the patient's chest cavity is usually distended during cardiac arrest and the condition can only be further exacerbated by lifting the patient. Therefore, during the initial stages of resuscitation, chest compression is usually carried out without any pressure being applied to the chest wall. Furthermore, once chest compression

---

has started, standard CPR algorithms dictate that chest compression be carried out with a rate of 30 compressions per minute. The rate of 30 compressions per minute is required to avoid compromising the health of the patient and prolonging or worsening the patient's already deb
